Career Summary

- ❖ Experienced, hands-on engineer focused on designing, building and operating production systems.
- ❖ Recognized for blending broad technical expertise with cross-team collaboration and leadership.
- ❖ Experienced in optimizing system performance, with recent focus on building and hardening mission-critical financial services in AWS.
- ❖ Recent roles include contract and consulting engagements focused on high-impact delivery for large and mid-size enterprise teams.

Skills / Expertise

- ❖ **Languages:** Python, TypeScript, Golang, Java, C#, C/C++ ...
- ❖ **Frameworks:** Databricks/PySpark, FastAPI, Django, Flask, Node, Spring, React, Angular, Express
- ❖ **API & Integration:** REST API design, OpenAPI, GraphQL, gRPC, WebSockets, Event Streaming
- ❖ **Front-End Development:** HTML5, CSS3, Tailwind CSS, Responsive Design, a11y, i18n
- ❖ **Cloud & DevOps:** AWS (Lambda, Step Functions, API Gateway, Fargate), CI/CD (GitHub Actions, Jenkins, CircleCI), GCP, Terraform, Helm, Docker, Kubernetes, Kafka
- ❖ **AI Tooling:** OpenAI API, Claude Code / Skills / Agents / MCP, HITM SDLC, CI/CD Integration
- ❖ **Performance, Resilience & Observability:** Instrumentation, Distributed Tracing, SLI/SLO/SLA, Profiling, Caching, Load Balancing, Chaos Engineering, OpenTelemetry, NewRelic, DataDog, ...
- ❖ **Databases:** Data Lake, DynamoDB, S3, MySQL, PostgreSQL, Snowflake, Redis, KTable
- ❖ **Other:** TDD/BDD, Agile/Scrum, Performance Optimization, Distributed Systems

Professional Experience

Capital One — San Francisco, CA | 2023 – June 2026

Senior Software Engineer (Contractor)

- ❖ Introduced a multi-agent AI skill resulting in 500% efficiency gain during support rotations to promote automated security PRs across all team repositories.
- ❖ Developed Databricks Notebooks and Spark Jobs to locate & process billions of Data Lake records.
- ❖ Designed and implemented multiple scalable AWS **Lambda** services in **Python**, **TypeScript** and **Go** to process data, events or user requests and deliver updates or responses.
- ❖ Created, evangelized and supported enterprise-wide BDD integration testing patterns in **Python**, **Go**, **Node** and **Java**, improving test coverage and consistency across 2,000+ teams.
- ❖ Initiated and led a program leveraging **AWS FIS** and custom tooling to run controlled failure experiments in production as part of CI/CD, increasing resilience and reducing recovery times.
- ❖ Led development of an Enterprise Site Reliability service combining a serverless **Golang** backend (**DynamoDB**) and a **TypeScript**/Angular frontend, delivering Error Budget dashboards, automated SLO workflows, and real-time notifications.

Crunchyroll | 2021 – 2023

Senior Software Engineer

- ❖ Developed AWS Step Function-driven **TypeScript** Lambdas for content management workflows.
- ❖ Led refactoring of four **Golang** backend services to improve testability and code coverage by 25%, increasing stability and developer productivity.
- ❖ Optimized **MySQL** queries for two high-traffic CMS services, increasing throughput by 20–50%.
- ❖ Reduced frequency and MTTR of critical incidents by 30% through code improvements, enhanced dashboards, and custom metrics with New Relic NRQL.

Independent Consultant | 2020 – 2021

Software Engineering

- ❖ Created a batch processing system using **Spring** Batch for large-scale ETL workloads.

Revinate | 2018 – 2020

Staff Software Engineer (Distributed Systems)

- ❖ Decomposed a **Java** monolith into containerized microservices on AWS Kubernetes.
- ❖ Built a high-throughput customer data pipeline using Kafka/KTable, gRPC, and Spark.
- ❖ Designed a plugin architecture enabling field technicians to deploy custom ETL logic independently, increasing core team availability by 50%.

Earlier Experience (Selected Highlights)

Navis | 2011 – 2017

Staff Software Engineer (Backend / Integration Systems)

- ❖ Architected Java Equipment Control Interface (ECI) facade API to control Automated Guided Vehicles and Cranes.
- ❖ Designed and implemented a Spring Boot **REST API** to integrate new crane control systems, reducing onboarding time by 75%.
- ❖ Reduced MTTR by 15% through instrumentation providing visualized traces of protocol interactions with external equipment.
- ❖ Educated others by providing mentoring, peer reviews, frequent blog posts and presentations at lunch and learn forums.
- ❖ Championed test driven development (TDD) with CI/CD tooling and test coverage reporting.

Education

University of California, Los Angeles — B.A. in Economics
