

Marty Ross

July 2016

Summary of Experience

- Flexibility working as developer (team player or independent), or as leader and mentor of a team of up to 15 developers using **agile, test-driven, iterative process**
- Three years' experience as Enterprise Application Integration & J2EE Security **Architect and Lead Program Engineer** at FORTUNE 500 Company
- Led mixed, multidisciplinary team of on-shore & off-shore engineers from project inception: concept through post-delivery maintenance and support
- Success leading re-factor of company's main J2EE web application and subsequent deployment cycles of this platform for multiple clients
- Proven results as contract lead of overseas team to port and integrate public company's flagship Windows/C++ Point of Sale application to Linux/Java platform for a major New-England retail chain
- Demonstrated effectiveness at **developing, presenting and representing system architecture** for business and technical stakeholders in initiatives at both private and governmental agencies

Key Strengths

- Extensive experience developing optimized, integrated, cross-platform systems using an **iterative, test-driven-development paradigm**, meeting specific performance requirements according to service level agreements
- Use of instrumentation and analytical methods to identify and optimize performance issues in distributed and load-balanced systems
- The design, development and publishing of object-oriented class frameworks and in-house development toolsets and build platforms
- Process-oriented, **technical leadership**, focusing on operational efficiency, advocacy of best practices, repeatability, and effective team collaboration
- Interviewing, training, **mentoring and managing development team** members
- **Responsiveness to changing requirements and management priorities** in a fast-paced, deadline-driven environment
- Pursuit of testability and repeatability of software components and their integration through development and advocacy of common process and development frameworks; and intelligent use of software control management tools and workflows
- Design and development of traditional and specialized **asynchronous** device drivers and kernel-level modifications in both Windows and Unix environments
- Implementation of entire TCP/IP stack, covering all 7 OSI reference layers

Technology Summary

Script Languages:	Groovy, Javascript, Perl , Python, Tcl, PHP, Rexx, bash, sh, ksh, csh
Non-script Languages:	Java, C#, C/C++ , PL/SQL, T-SQL, Visual Basic, PL/I, Forth, assembler/386
Tools:	IntelliJ , Eclipse, Ant, Checkstyle, Cygwin, WSAD, MS VS.NET, XML Spy, MS Office Tools, MagicDraw UML, Rational Rose, OPNET Network Modeler, GNU toolset, awk, vi, sed, Oprofile, SoftIce, JProbe, Cognos ReportNet
SCM & Workflow:	Subversion , Perforce, Tinderbox, Jira, TeamCity, VSS, PVCS, CVS, DevTrack, BugTrack, Rally, Salesforce
Operating Systems:	Windows, Linux, Solaris
APIs/SDKs:	JDK 1.4-1.8, J2SE, Java SE 6, 7 & 8, J2ME, JAAS, JNDI, Swing, AspectJ , Microsoft.NET, POSIX, Windows/Win32, STL, DDK, MFC, Xlib/Motif, Cognos BIBus, Mule ESB, ActiveMQ
Protocols:	HTTP, LDAP, XML-RPC, SOAP, TCP/IP suite, RSVP, MPLS, DOCSIS
Database Access:	JDBC, Hibernate , DAO, Jet/OleDB, ODBC
XML Technologies:	XML, XSLT, XSL-FO, XPath, XQuery, XSD , RelaxNG, DTD, XMLBeans, JAXP, JAXB, DOM
Component Technologies:	JMS, JMX , EJB3, WSDL, COM/DCOM, CORBA
Web Technologies:	AJAX, D/HTML, J2EE, EE 5 , WML, .NET, BPML, JAAS, CSS, JSP, JSF, Facelets, SEAM, Struts
Application Servers:	Tomcat , WebLogic, JBoss, JRun, WAS, .NET
Web Servers:	Apache , IIS, Sun ONE, TUX
Databases:	Oracle 9i, 10g, 11 , SQLServer 2008R2, 2012 , MySQL
OASIS TCs:	SAML, ebXML, LegalXML, XACML
Methodologies:	Agile (Scrum, Extreme), RUP

Industry Experience

Navis Staff Engineer

**May 2011 – Present
Oakland, CA**

Created generic Equipment Control Interface (ECI) and led several implementations of it for controlling various automated Equipment Control Systems for Automated Guided Vehicles (AGV), Automated Stacking Cranes (ASC) and semi-automatic Quay Cranes (QC)

- *Technologies: Java 7 & 8, JUnit, Hibernate, JDBC, Groovy, XSLT, Tomcat, Mule ESB, ActiveMQ, Spring, Perl, SQL Server, Oracle, HTML, Javascript*

Application Integration Specialist Perot Systems / Dell Services

**August 2009 – May 2011
Wellesley, MA**

Led several efforts in “Web Applications” team in the Solutions Delivery group at Harvard Pilgrim Health Care, including:

- IT solutions support and enhancement for Product Data Management (PDM) project, comprising mainly Windchill PDMLink and Arbortext PE Server and Editor applications, including overall integration with corporate infrastructure and enhancements / support of custom deployment
- Leveraging existing and development of new Application Monitoring tools / dashboards to reduce / streamline troubleshooting and facilitate early detection / resolution of problems, before customers do
- Creation and operationalization of Reconciliation Reports using PL/SQL spanning all corporate membership databases

Technologies:

- Java, JSP, XML, XSLT, SOAP for developing web services to integrate Windchill PDMLink into corporate SOA environment
- Perl, Oracle SQL and PL/SQL to extract and correlate comprehensive set of historical membership records for selected group of Medicare participants across multiple data sources
- Used Perl to convert enrollment records from an external format to an internal format, and integrated this into an existing Perl EDI framework
- Designed and used PHP to implement a “monitoring dashboard” to provide team with a quick overview of connectivity between components of the portal applications available in the corporate internet and intranet
- Wrote custom monitoring application scripting framework in Java; to perform availability monitoring tests and deliver results to existing monitoring / event dispatching framework (HP's OpenView)
- Tightened communication between the Web Apps team and the corporate application monitoring team through documentation and personal relationship-building, thereby increasing testability of and confidence in monitoring
- Designed integration solution (including AAA toolset) for PDM Applications, including Windchill PDMLink and Arbortext PE Server into the corporate intranet, passed security team reviews

- Served as system administrator for corporate deployment of MediaWiki and Apache Proxy servers (serving both internet and intranet users)

Senior Application Architect
Mount Sinai Medical Center

August 2008 – Feb 2009
New York, NY

The Information Technology Development Center develops in-house applications supporting all departments in the Mount Sinai Hospital and School of Medicine.

- Technologies used: Oracle, Java application servers, server-side and client-side Javascript, Python, Perl, SuSE Linux, Cygwin-X, BitKeeper, Trac ...
- Developed Oracle data model and API layer to support new functionality Extended shell scripts to support new ETL of mainframe data
- Wrote Python plug-ins to integrate SCM and Issue Tracking systems
- Contributed to the development of best practices (coding, workflow and requirements) and Standard Operating Procedures in service organization
- Developed monitoring tool and dashboard to report on health of critical back-end processes
- Led research and development efforts for infrastructure upgrade of Java and Javascript engines and migration to Java application server platform
- Used iterative, milestone-based development (agile) processes

Senior Software Engineer
The Grow Network / McGraw-Hill

October 2004 – July 2008
New York, NY

The Grow Network produces customized printed and web-based reports and instructional materials for students, teachers, parents, school–, district– or state administrators, offering guidance based upon test results, to each level of client users.

The Grow Pipeline is a highly scalable distributed report generation process enabling Grow to produce reports throughout the school year for over a third of the Nation's primary-grade students, and employs a decentralized orchestration of parallel processes across a configurable number of nodes in a production server farm; these processes drive sequential phases involving several technologies, including: Python, Oracle PL/SQL, Java, XSLT, DataPower XML Accelerators, XSL-FO and PDF, PostScript or AFP.

- *Technologies: Python, J2EE (WebLogic, JBoss, JRun, JSP, JSF, Facelets, SEAM, Struts, JAAS, EJB3, **Hibernate**, JDBC), Oracle, Cognos, Oracle Access Manager (COREid), LDAP, XSL (XSLT, XPath, XSL-FO), JDK 1.6, **Perl**, C#, HTML, HTTP, **AJAX**, **Javascript**, CSS, **Apache**, Ant, JNDI, Eclipse, **JUnit (TDD)**, **Linux**, Cygwin-X, Perforce, BugTrack, DevTrack, ...*
- Working in roles of developer, integration architect, J2EE security architect and **lead program engineer**:
 - o led architectural design, including developing integration framework supporting four online systems (including a "Single-Sign-on" realm), five batch processes generating tens of millions of reports per year for distribution via web, FTP and print channels
 - o participated as developer and mentored junior members of the engineering team across all technologies used

- o developed and socialized best practices including **agile processes** (TDD, CI, iterative, milestone-driven “sprints”), coding standards, normal and exceptional workflow, software configuration management
- o conducted code reviews
- o negotiated and tracked delivery milestones
- o facilitated cross-departmental communication between Engineering and Product, Client Services, Project Management, Quality Assurance, and Executive Management groups

**EDP Senior Programmer / Analyst
Superior Court of California**

**March – August 2004
Los Angeles, CA**

- Developed a secure webservice to deliver traffic citations from divisions of the Los Angeles Police Department to the Court, and built a monitoring front-end website allowing clerks to retrieve a PDF facsimile of citations, by search criteria – using MS Visual Studio / C#
- Provided end-user and administrative support for several critical legal-support applications to clerks and judges
- Wrote and managed continuous availability monitoring applications to ensure compliance with SLA
- Spearheaded an ongoing developer forum to discuss and advance the use of SOA technology and XML schema for information exchange in the Court

**Retalix Ltd.
Porting Consultant**

**January 2002 - February 2004
Dallas, TX**

- Guided Retalix in all technical aspects of porting their flagship Point of Sale product from C/C++ on Microsoft Windows to Linux, including the complete redesign of the user interface to use a Java API (JavaPOS) according to the requirements of the Company's contract with a major Northeastern retailing chain – using C/C++, STL, Linux, JavaPOS, JDK 1.3

**Product Architect and Senior
Software Developer
Rampt.com**

**November 2000 - January 2002
Los Angeles, CA**

- Captured, documented, presented and led the architectural analysis for a new broadband media distribution platform funded by venture capital – using UML, J2ME, TCP/IP, XML-RPC, RSVP, WAP, WML, Apache
- Developed prototype of “home-top box” kernel, including streaming media server and embedded browser extensions
- Performed hundreds of Monte Carlo simulations of network load to validate traffic-shaping models and algorithms, testing the effects of integrating various COTS and ready to use technologies – using OPNET modeler
- Developed iterations of statistical models to help support and document architecture

**Product Architect
Scour.com****June - November 2000
Los Angeles, CA**

- Participated as member of development team to learn and contribute to existing software base
- Documented current system architecture, and identified “hot spots” underlying recurring operational issues and availability bottlenecks
- Produced new software architecture for the next-generation of the company's flagship “SX” product, featuring increased scalability, maximized leverage of an existing codebase, incorporation of digital rights management technology and extensibility through generalized plug-in interfaces – used C/C++ , STL

**Software Architect
Libraary.com****January - June 2000
Los Angeles, CA**

- Participated as member of a collaborative and iterative discovery and design process, refining and demonstrating use cases through proofs-of-concept of a micro-payment software and media delivery platform using traditional and non-traditional digital delivery backbones – used: C++ , STL, Python, Visual Basic, UML, Iterative Development

**Senior Software Engineer
Peerless Systems Inc.****April - August 1999
El Segundo, CA**

- Developed new and maintained existing Windows printer drivers in C++

**Senior Software Engineer
PLATINUM Technology Inc.****February 1997 - April 1999
Inglewood, CA**

- Implemented multi-threaded command-line tool (CLI) and scripting language to control and test the integrated PLATINUM Security Model Architecture (PSMA) API (this API was used as the security foundation of PLATINUM's integration efforts for acquired technologies) – language: C
- Designed and developed auto-build procedure to build this API suite and the CLI across seven different platforms, including flavors of Unix and Windows – technologies used: *NIX, ksh, Perl, CGI, ssh, scp
- Developed the internationalization (i18n) and localization (l10n) standards for the API – language used: C
- Ported PLATINUM's MERGE386 (Windows emulation) product to SCO Unixware 7 – language used: C/C++ /Assembler

Prior Experience

1980 - 1996

- Senior Software Engineer, Point Of Sale Ltd., Herziliya Israel (1995-1996)
- Software Engineer, Contahal Ltd., Givataim Israel (1990-1994)
- System Programmer, Computing Resource Center, Los Angeles CA (1981-1989)
- Software Author, Hayden Books, Los Angeles, CA (1980)

Education

University of California at Los Angeles

Bachelor of Arts, Economics

(With undergraduate and graduate coursework in general computer science and statistical applications, data analysis & presentation)
